

The Greatest Health Food in History?

Miracle Health Food Stuns World-Class Researchers...
Amazing discovery blows away all other Anti Aging superfoods!
It packs over 100 life-enhancing nutrients including:

- 18 Amino Acids
- 13 Minerals
- 9 Vitamins
- 52 Enzymes

Read this **NOW** and quit worrying about your

- Immune health
- Blood sugar
- Joint health
- Energy
- Digestive health
- Free radical levels

Or, any other age-related health issues...

Did you know that most of us can anticipate an average lifespan of just 77.2 years? What's worse is that a good number of those years may not be spent in good health. But, what if you had access to the most prized secret to living longer and healthier than you ever imagined? In just a few moments, you're going to find out the secret that's changing the health of people all over the world.

What you're about to read might make you feel much better about your health and your longevity! You're about to discover an incredible gift from nature - a miracle life-enhancing superfood that could help change the way you age.

The Brazilian Rainforest Secret that Led to One of Nature's Most Remarkable Nutritional Breakthroughs in Health and Longevity...

For decades, medical researchers puzzled over the fact that the people of Piedade, a small mountain town in the humid rainforest of Brazil, lived well into their 100s and were almost never bothered by serious illnesses like cancer, heart disease, arthritis, high blood pressure, diabetes, or Alzheimer's. In fact, in their later years, they enjoyed the same vitality, stamina and had a zest for life that they had when they were younger.

For years, scientists attributed this incredible health and longevity to some powerful genetic defense, passed from generation to generation.

But in the 1960s, a Japanese researcher discovered their secret - a rare mushroom native to the local mountains of the Piedade area. This special kind of wild mushroom, harvested from lush, virgin rainforest soil, produced health miracles not seen in the same type of mushroom grown in other areas of Brazil or anywhere else in the world. It turned out that the people in Piedade were eating this mushroom as part of their daily diet, even brewing it into their tea.

That's good news, because, while you can't do anything about your genetic makeup, you can benefit from the life-enhancing nutrients of this amazing mushroom.

They believed that this miracle mushroom gave them mystical, almost supernatural ENERGY and STRENGTH...

When industrial growth nearly wiped out the ancient Piedade region, this mushroom all but vanished with it. The name of the mushroom is *Agaricus Blazei* or known to the natives as the "Mushroom of Life."

Well, so far it's just anecdotal evidence, right? But everything suddenly changed when...

Years later in Japan, researchers at Kobe University finally started running tests (they were able to capture some *Agaricus Blazei* mushroom before it got wiped out)...

And when the results came in, they were astounded. The mushroom contained large amounts of critical nutrients, such as vitamins, minerals, essential amino acids, antioxidants, enzymes, fibers and beta glucans.

*"Beta glucans are a group of naturally-occurring polysaccharides (complex sugars) that are part of the cell walls of bacteria, plants and fungi. The beta glucans in the *agaricus blazei* mushroom are believed to be the compounds responsible for its immune boosting effects." Dr. Andrew Weil, M.D.*

The news about *Agaricus Blazei* spread quickly and needless to say, it became and remains the "must have" daily supplement in Japan for staying healthy.

According to the World Health Organization, Japan ranks #1 in healthy life expectancy (the U.S. ranks 27th)...

And now, you can find over 100 clinical studies on the mushroom. The excitement about the Agaricus Blazei mushroom is so great that there are people growing it from backyards in Brazil to hillsides in Europe and to places all over Asia. All of these represent variations of the heirloom Agaricus Blazei from Piedade, yet not one could replicate its healing power and life-enhancing attributes.

"Match Maker, Match Maker, Make Me a Match"

A group of U.S. mycologists (the technical term for mushroom experts) became extremely interested in the health benefits of this amazing miracle mushroom and wanted to see if they could make this mushroom even more potent.

Through trial and error, they combined more than 200 different strains of other Agaricus Blazei with the authentic Brazilian Agaricus Blazei strain looking for the right combination to increase its potency. Finally, an Agaricus Blazei strain picked from a raspberry field in California was introduced to the Brazilian strain..... And unexpectedly, it was love at first sight. The potency levels tested off the charts! Known as H1X1, this new Agaricus Blazei hybrid strain has higher levels of beta glucans and is more powerful than either of its "parents." The mycologists knew they created a nutritional goldmine.

Introducing H1X1 Agaricus Blazei Hybrid - the most powerful super-mushroom of all!

(NOTE: Don't worry if you don't like to eat mushrooms, we'll take care of that in a minute.)

So incredibly potent and so rare that the "match-making" mycologists applied for a U.S. patent, which is no easy task when dealing with nature.

The purity of H1X1 is protected by a proprietary organic crop growing process that replicates the growing conditions of the original Piedade region in Brazil. Each crop of H1X1 is tested using patented DNA fingerprinting technology to ensure that the proper make-up from each mushroom is maintained, thereby guaranteeing the authenticity and potency.

This DNA is so valuable that it is locked in vaults within secure facilities in the U.S. and in Europe.

Also, H1X1 is taken through a patented 10-stage extraction process where...

- Twice as much protein is extracted
- 10 times as much fiber and essential fatty acids is extracted
- 16 times as much beta glucan is extracted

The extract of H1X1 was compared to a popular Agaricus Blazei supplement in Japan and found to be 3,000 times more potent. 3,000!

"H1X1 is an exceptional product containing beta-glucan levels that are higher than any other Agaricus blazei strain we have tested. H1X1 is your guarantee of authenticity and effectiveness; it's proof of product quality." Dr. Mark Wach, Ph.D., World's Leading Mushroom Expert

H1X1 is NOW available exclusively through Waiora...

AgariGold with H1X1 is a revolutionary life-enhancing superfood setting the gold standard for total health, well-being and anti-aging therapy.* It contains a unique liquid formulation creating a powerhouse of critical nutrients needed for a healthy and active life.

In addition to the prized ingredient, H1X1, **AgariGold** contains Sasa Bamboo leaf extract, quite possibly nature's most powerful antioxidant. Sasa Bamboo acts as a potent free radical scavenger. It is a native Japanese plant that has been used for medicine in Japan for many centuries and also used to preserve food, most notably sushi, for days without refrigeration.

AgariGold is loaded with amazing health benefits including:

Promotes overall health and well-being*
Supports a healthy immune system*
Increases Natural Killer (NK) cell activity*
Protects against free radical damage*
Nourishes the digestive system*
Supports normal blood glucose levels*
Supports joint health*
Energy support*

Plus, it's

- All-natural
- Contains certified organic ingredients

- Vegetarian
- Free of artificial flavors, artificial colors, preservatives and sweeteners

Try **AgariGold with H1X1** and feel the results for yourself. You'll understand why people are heaping such high praise on this new breakthrough!

There's no question that **AgariGold** will soon be taking the nutritional world by storm in the coming months as word continues to spread of its incredible health value. Please take this as a wonderful opportunity to make a difference in your health as well as to others for the long term.
